

BON GUIDE FOR SKUNK ODORS

The following application rates are suggested for skunk odors using BioWorld Odor Neutralizer BON-CC-41:

There are ranges for dilution depending upon the severity of the skunk odors. The variable range is 4 - 8 ounces (for severe odors throughout home use 8 - 12 ounces) BON-CC-41 to a gallon of distilled water. Adjust application amount and frequency depending on severity of odors. Application may need to be completed 2 - 3 times to fully eliminate odors.

GENERAL INSTRUCTIONS

1. Dilute BON according to above rates in tank sprayer or fogger. Spray areas affected by skunk odors.
2. Apply to HVAC system - A fogger can also be set up adjacent to the intake register and the fan turned on to disburse the fog through the HVAC system.
3. Using same dilution rates, BON can be added to a wash water and item affected by skunk odor can be wiped down or rinsed with wash water solution.
4. For laundry, apply 2 - 4 ounces of BON directly in washer.

Note: For Pets sprayed by skunk, apply BON in same dilution rates as above using spray or wash water methods. Depending upon severity of odors, application may need to be applied 2-3 times to fully eliminate odors. BON is completely safe and will not harm pets or humans.

FINAL TOUCH

BON can also be fogged or sprayed into homes, rooms, vehicles etc that have been affected by skunk odors. Use the BioWorld fogging units to fog BioWorld Odor Neutralizer into the ventilation system and other parts of the facility.
