

# Moat Information:

## Keeping Ants & Bugs Out Of Pet Food

### USING WATER:

Pour 1 to 2 quarts of water into the moat. Adding a few drops of bleach will keep the water fresh and discourage mosquitoes. Change water as needed.

### USING POWDER

You can use Ant Dust Insecticide, Food-Grade Diatomaceous Earth or Powdered Carpenter's Chalk. Remove the white food bowl. Sprinkle powder liberally into the moat. Be sure to cover the bottom of the white clips. Reinsert food bowl.

### USING ANT SPRAY:

The design of the Outdoor Feeder prevents pets and food from coming into direct contact with the spray.

The label on most cans of Ant Spray indicate that it is safe for humans and pets to contact treated areas after the spray is dry. Follow label directions.

Remove the white food bowl and lightly spray the inside of the moat. (Do not spray interior feeder bowl) One application of spray can keep ants out of the moat for weeks. Allow spray to dry before reinserting the food bowl.
